SUMMARY

Software Engineering undergraduate at UniCEUB and back-end developer with contract experience building production systems for e-commerce and for the legal and medical sectors. I work mainly with C#/.NET, Python, Java and PostgreSQL, built a judicial data platform that normalizes 19 court integrations behind one API, and maintain an open-source desktop application in Java and Angular.

EXPERIENCE

Full Stack Developer (contract, remote) · MAY Derma

May 2026 – Jul 2026

- Built a C#/.NET affiliate and prescriber platform with referral links, coupons, sales attribution, commissions and dashboards, serving 20 registered partners.
- Set up and customized the WordPress/WooCommerce store — 15 products with variants, bundles and promotions — which has taken 259 paid orders from 224 customers.
- Integrated payment, shipping and marketing systems over webhooks and async workers; maintained production on Docker, Nginx, PostgreSQL and a Linux VPS.

Back-end Developer (contract, remote) · Agiliza Doutor

Aug 2025 – Feb 2026

- Implemented 149 REST endpoints as full vertical slices — data modeling, migrations, DTOs, repository, controller and documentation — over a 32-table schema, in Scrum sprints.
- Built a Python web-scraping pipeline that collects and normalizes case updates from court portals, supplementing incomplete unified API data; it later evolved into CourtIQ.

PROJECTS

CourtIQ — Judicial data platform

Personal project · not deployed

Python · FastAPI · PostgreSQL · Redis · Playwright · Docker

- Normalizes 19 court integrations (PJe and e-SAJ) into one domain model through a registered adapter layer, with multi-tenant organizations, API keys, SDKs and billing.
- Async pipeline with queued workers, retries with exponential backoff and jitter, at-least-once webhooks and a dead-letter table; 634 tests, 504 of them for the API at 66.42% line coverage.

ARPEON — Open-source desktop score editor

2026 – present

Java 25 · Angular 22 · TypeScript · Gradle · JCEF · Audiveris · github.com/junior089/ARPEON

- Local-first application for reading, editing and practising sheet music: MIDI playback, YIN tuner, fixed-tempo performance reports and PDF/image score recognition.
- 11 Gradle modules behind an authenticated loopback bridge; 242 JUnit and 184 Vitest tests; CI on Windows, Linux and macOS; per-user Windows MSI installer.

Avivando — Member management platform

Jun 2026 – Sep 2026

React · TypeScript · Payload CMS · PostgreSQL · Node.js

- Built in a pair with a senior engineer and in production for over 500 users: two integrated applications with role-based access control, 23 content modules and 181 automated tests in CI.

Visio Divina — AI presentation generator · UniCEUB extension project

Jun 2026

TypeScript · React · LLM (NVIDIA NIM) · Zod · Supabase/PostgreSQL · github.com/junior089/visio-divina

- Team web application that turns sermon scripts into editable slide decks; model output is validated against Zod schemas with a repair prompt and a fallback, with Row Level Security and PPTX, PDF and PNG export.

EDUCATION

B.Sc. in Software Engineering · Centro Universitário de Brasília (UniCEUB)

Feb 2026 – Dec 2029 (expected)

TECHNICAL SKILLS

Languages: C#, Python, Java, TypeScript, JavaScript, SQL
Back-end & data: .NET (ASP.NET Core), FastAPI, REST APIs, webhooks, queues, async workers, idempotency, PostgreSQL, Redis
Front-end: Angular, React, Next.js, Tailwind CSS
Tools & practices: Docker, Linux, Nginx, Git, GitHub Actions, Azure DevOps · Scrum, requirements analysis, automated testing

CERTIFICATIONS, COMMUNITY & LANGUAGES

Certifications: Oracle Cloud Infrastructure Certified Architect Associate (1Z0-1072-26) · Oracle AI Database Certified Foundations Associate · AWS Certified AI Practitioner (AIF-C01) · AWS Certified Cloud Practitioner (CLF-C02)
Community: AWS Builder Center — Campus Builder Student Leader, Brazil (2026–present) · Microsoft Azure community
Languages: Portuguese (native) · English (intermediate, professional reading and writing)
